PRESS RELEASE

PROPEX® II Apex Locator

The **PROPEX® II Apex Locator** from Maillefer is now available in Australia; it features a new generation full colour visual display for improved tracking of the files. It also has the latest multi frequency technology incorporated into this 5th generation apex locator and an extended apical zoom function, which activates when the file reaches the apical area, assisting the dentist to locate the apex in most types of root canal conditions. The **PROPEX II** apex locator has a small footprint and operates on a rechargeable battery, so it can be moved between dental surgeries with ease.

For further information please contact DENTSPLY Australia.
